

Features and Functionality

Our platform is founded on cutting-edge reality capture technology and adheres to the highest IoT and building automation standards.

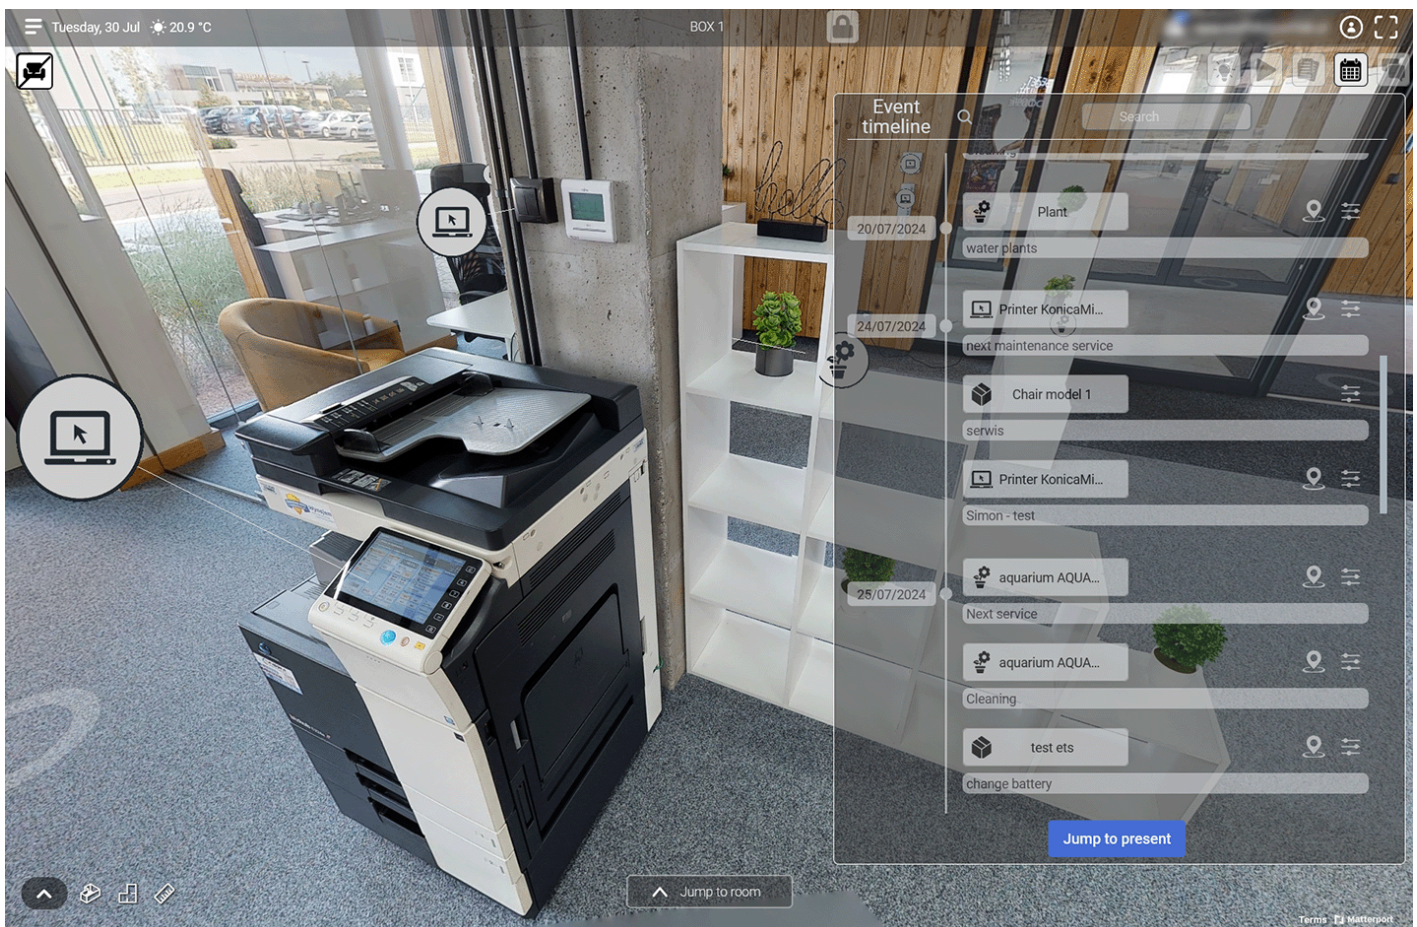

Although SIM-ON has a lot of functions and there are still many in development, main features of the SIM-ON solution.

- Consolidated vendor integration in a single hub
- Intuitive and user-friendly 3D interface
- Secure and effortless access to device data
- Visual representation of device activity and configuration
- Accurate spatial device mapping
- Comprehensive data compilation: devices, equipment, materials, gadgets
- Inclusion of photos, videos, and documents

- Diverse categories for intuitive administration
- Scheduling and supervision of facility maintenance tasks
- Real-time 3D facility inspections
- Customizable activity timeline graphs
- Seamless integration with preferred news and widgets
- Hassle-free issue reporting via task manager

See [Detailed Features List](#) for comprehensive list of every functionality
