- **Electricity price conversion**

Toggleable option for automatic power price conversion

SIMLAB Cloud

Your main profile view where you can change your password/name and access the SIMLAB apps from.

SIMLAB Cloud is a comprehensive digital platform designed to support the entire lifecycle of building management through its Digital Twin solutions. It integrates advanced technologies such as Internet of Things (IoT), and 3D visualization to create a digital replica of physical assets, like houses, hospitals, factories. This digital ecosystem allows users to manage every aspect of a property from design and construction to maintenance or renovation.

You can select one of two solutions:

- **SIM-ON:** A versatile platform that leverages the Matterport scans to create a dynamic 3D visual interface. It integrates seamlessly with IoT and building automation systems like Fibaro, NETX, Samsung SmartThings and KNX, allowing for effective asset management and facility maintenance.
- **STAGES:** Another solution under SIMLAB Cloud, STAGES focuses on monitoring the construction process and facilitates communication among teams and stakeholders. It offers tools for comparing different phases of a project using Matterport scans, 3d models, which helps in managing changes and maintaining a historical record of the building's state using the timeline.
