

Connections

The Connections tab displays all the 3rd party HUBs that are currently connected to your space. From this view you can add or remove HUB connections.

The screenshot shows a web interface for 'Providers Connections'. On the left, there is a sidebar with a section titled 'Add/remove connections' containing a list of categories: Smart Home, Smart Things, KNX, NETx, and IBM Maximo. The main area displays a table of connected HUBs. The table has columns for 'HUB names', 'Serial Number', 'Connection status', and 'Login status'. One HUB is listed with the name 'KNX', a serial number, and a status of 'Connected'. Below the table, there is a 'Touch site id' field and a 'Log out' button. The interface also shows '1 Device(s)' and a user profile icon in the top right corner.

- **Add/remove connections**
 - Smart Home
 - Smart Things
 - KNX
 - NETx
 - IBM Maximo

The connected HUBs listed here will be automatically sorted to corresponding families they belong to. HUB names will be displayed here together with serial numbers of the HUB. Additionally you can check whether the HUB is currently online and toggle its status manually.
