# Interior Editor

In the model browser you can find 3D models, grouped by a few categories. It's a great tool for organizing and planning purchases, renovations, and interior design projects.

After entering the Interior editor, the Model browser will be automatically opened. You can close it at any time, simply click the **arrow** ⟨⟨ icon.

If you decide to reveal it later on, you can do this by clicking the **armchair** 🛋 icon located at the top left corner.

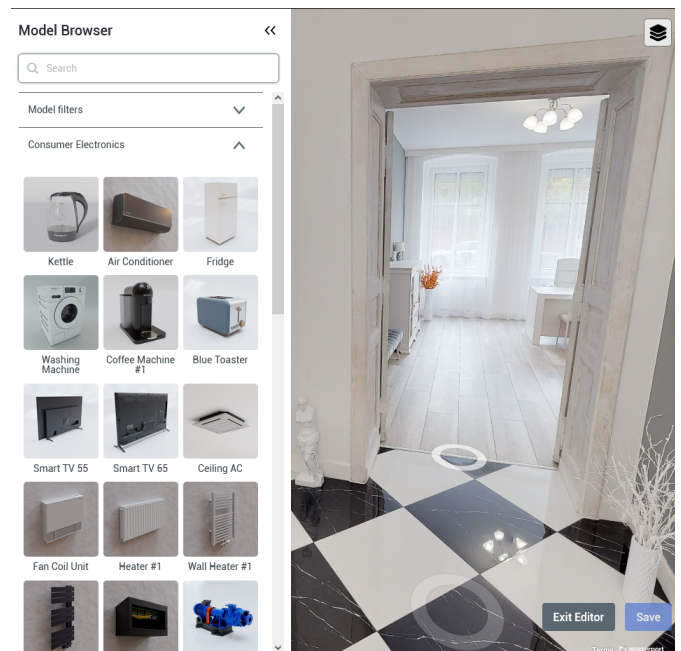

- **Search**
  You can find a model you're looking for by typing the name in the search bar.

- **Model Filters**
  You can look for the specific model using filters.

- **Model Types**
  There are 6 model types: consumer electronics, decorations, furniture, lights, premade sets and walls.
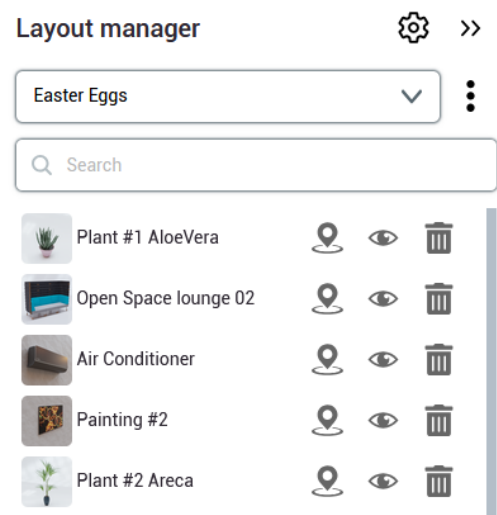

Layout

In the Layout manager window you can see the list with all the 3D models added to the project and manage different model sets, called layouts, to set up multiple variations of spaces to preview.
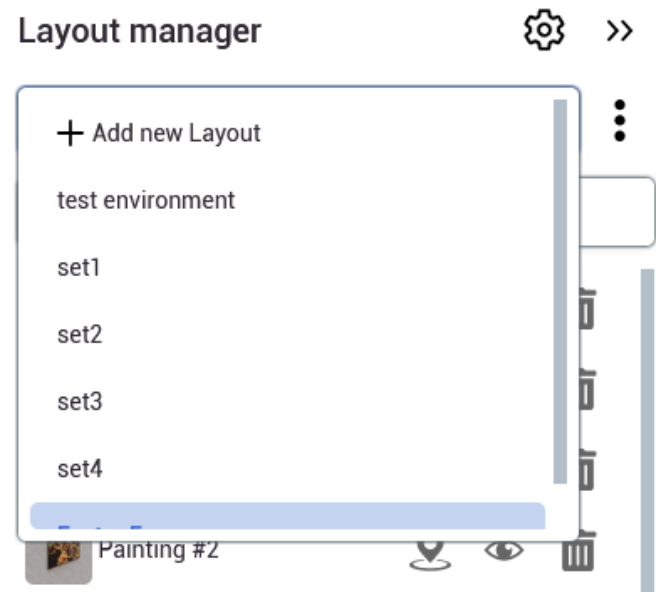

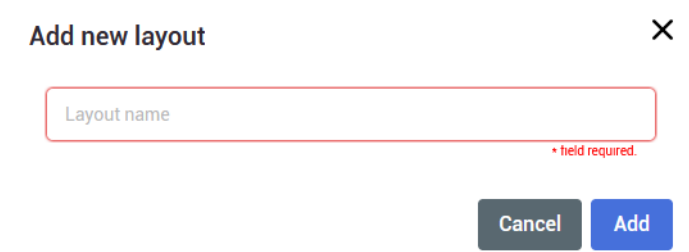

Access the Layout Manager by clicking **layered** icon located in the top right corner.

To close the layout manager window, click **arrow** icon.

The uppermost tab of the layout manager is for grouping the models into "layouts".

By expanding the tab with arrow down.png or typing you'll see a list of existing layouts and an option to add ＋ a new layout.

- **Search**

  After adding 3D models to the scene, you can search for the desired model in the current layout by typing its name in this text field.

- **Model List**

  A list with all the models added to the currently selected layout.

- **Model Actions**

  You can click on the **pin** pin-location-2.png Image not found or type unknown icon to see where the object is placed, change visibility of the model by clicking the **view** eye.png Image not found or type unknown icon, or delete the model by clicking the **bin** trash.png Image not found or type unknown icon.

- **Layout Actions**

  Further layout actions can be accessed by revealing the **options** more-options.png Image not found or type unknown tab. There you are able to clone the currently selected layout, rename it or delete it.

- **Layout toggles**

  To access the toggles, simply click the **settings** ⚙ icon. You can toggle the visibility of layout model sets and choose the default one to be displayed.
